

## **Prompt 1:**

**Old prompt:** "Write a social media post for our new shoe brand."

**Rewritten Prmpt:** "You are a social media manager for a premium, eco-conscious streetwear footwear brand."

Task: Write an Instagram caption for the launch of our new sneaker "AeroStep".

Context:

- Target audience: Gen Z and young millennials (18–30)
- Interests: sustainability, fashion, urban lifestyle
- Tone: edgy, authentic, hype-driven

Constraints:

- Maximum 75 words
- Include exactly 3 relevant hashtags
- Include a strong call-to-action directing users to the link in bio
- Avoid generic phrases

Output only the caption."

### **Explanation of Techniques:**

The original prompt was too simple, so the AI didn't really know what kind of post to write. I fixed that by giving it a clear role (social media manager) and proper context like audience, tone, and product. I also added some rules like word limit, hashtags, and CTA so the output is actually usable. This makes the result much more focused and realistic.

### **Before vs After Comparison:**

#### **Original Prompt Output:**

Step into something better. 

Introducing a new kind of comfort — where style meets everyday performance.  
Designed for those who move with purpose, our shoes are built to keep up, stand out,  
and feel just right all day long.

From morning hustle to late-night plans, we've got your steps covered.

This isn't just footwear. It's your new standard.

#StepForward #NewDrop #EverydayComfort

**Rewritten Prompt Output:**

AeroStep just dropped — lightweight on your feet, heavy on impact (not the planet).

Built from conscious materials, designed for the streets that never slow down.

If your style moves different, this is your pair.

Tap the link in bio before they're gone.

#AeroStep #StreetwearFuture #MoveConsciously

## **Prompt 2**

**Old prompt:** "Make our ad copy more creative."

**Rewritten Prmpt:** "You are an award-winning advertising copywriter known for emotionally compelling and sensory-driven campaigns."

Task: Rewrite the provided ad copy to make it more creative.

Definition of "creative":

- Focus on emotional benefits rather than product features
- Use vivid, sensory language
- Use strong active verbs
- Make it memorable and engaging

Example:

Input: "Buy our mattress. It is very soft and helps you sleep better."

Output: "Drift into the deepest sleep of your life. Our cloud-soft mattress turns restless nights into pure comfort."

Now rewrite the following:

"Buy our new noise-cancelling headphones. They block out sound very well and have a long battery life."

Output only the rewritten version."

### **Explanation of Techniques:**

The main problem with the original prompt was that "creative" is not clear. So I explained what creative actually means in this case. I also added an example so the AI understands the style we want. Giving it a role also helps improve the tone. Overall, this makes the output much stronger and less generic.

## **Prompt 3**

**Old prompt:** "Summarize this campaign brief."

**Rewritten Prompt:** "You are a Senior Account Executive at a top advertising agency."

Task: Analyze the campaign brief and extract key information into a structured executive summary.

Output Format (STRICT):

- Core Objective: (1 sentence)
- Target Audience: (bullet points)
- Key Deliverables: (list)
- Timeline & Budget: (concise summary)

Constraints:

- No extra commentary
- No introduction or conclusion
- Keep tone professional and precise

Campaign Brief:

We are launching a new summer beverage called 'Citrus Splash'. The goal is to drive brand awareness and trial among college students and young professionals aged 18-24. We need a 3-month social media campaign (TikTok and Instagram), a localized influencer partnership program in 5 major college towns, and experiential sampling at 3 summer music festivals. The total budget for this activation is \$150,000 and it needs to run from June 1st to August 31st."

### **Explanation of Techniques:**

The original prompt was too basic and didn't tell the AI what kind of summary was needed. I improved it by giving a clear format so the output is structured and easy to read. I also told it not to add extra text, which keeps the answer clean. This makes it much more useful for real work.
